---

Last summer, after the NSTA amended its position statement to acknowledge the viability of non-animal alternatives to dissection, I wrote to you with information about the availability and efficacy of non-animal learning methods in elementary and secondary science education. I hope that you found this information helpful and informative.

I am writing today to let you know that PETA has just launched an online dissection alternatives resource center designed especially for educators. The new site contains information on the many benefits of non-animal learning methods (with references to peer-reviewed educational research), physician-narrated video demonstrations of two leading virtual dissection software programs, PETA-specific discount codes for educational software products, comprehensive resource lists, and more.

I invite you to visit our site at [PETA.org/dissection](http://PETA.org/dissection); please feel free to use these resources and share them with others.

Thank you for your time. Please contact me if you have any questions about the site or issues related to non-animal learning methods in general.

Best regards,

Julian L. Carr, J.D.
