---

Aloha fellow HASTAers

here's some good information that I thought I'd pass along, especially for all you guys in Big Island. Seems like a great opportunity!

\*FREE TEACHER WORKSHOP: TELESCOPES ACROSS THE EM SPECTRUM (GRADES 8-12)

\*(March 5, 2010; Registrations due Feb. 19, 2010—Hawaii)

This free one-day teacher workshop, "How Telescopes Have Changed Our View of the Universe," will feature talks and hands-on activities about telescopes across the electromagnetic spectrum and what we've learned about the universe. The workshop is for teachers of grades 8-12, and will be held at the Hilton Waikoloa Village on the Big Island of Hawaii on Friday, March 5, 2010.

Topics include 400 years of the telescope, the extreme universe as seen by NASA's Fermi gamma ray telescope, how our knowledge about the universe has changed over the past 100 years, what are dark matter and dark energy, and more!

Scientists and education professionals from NASA and the Subaru Telescope will present the workshop. There will be an opportunity for a follow-up visit to the Subaru Telescope on Mauna Kea. See [\\_https://www.confcon.com/head\\_2010/workshop.php\\_](https://www.confcon.com/head_2010/workshop.php) for registration information (due by Feb 19, 2010.)
