Aloha HaSTA Members:

Please see the link below to a brief questionnaire that HaSTA is distributing in an attempt to collect information about science instruction in Hawai'i schools (both public and private) – and in particular the use of supplemental materials produced by the National Oceanic and Atmospheric Administration (NOAA).

We know the HaSTA membership uses a variety of instructional practices to teach K-12 students and to ensure they satisfy Hawai'i's standards in science. NOAA wants Hawai'i's science teachers to have access to relevant, high-quality instructional materials and professional development opportunities. Our hope is that this questionnaire will enable us to provide NOAA and others who provide the science community with assistance the kind of information they need to improve their products and services.

Please take ten minutes (or less) to respond to our questionnaire. All individual responses are confidential. However, the aggregated findings of the survey will be shared later with the HaSTA membership later this year.

Mahalo,
Jeff Piontek, President
HaSTA
